JB

Hi Matt

They said they will send you a sample kit which will probably contain a tube to put the ants in but they said to just freeze them and ship on dry ice.

Thanks
Jim

Hi Jim, thanks, that sounds great. I'll plan on grabbing some ants this weekend.

Do you know how they would like the samples? I can freeze them or put them in a solution (we usually store in ethanol).

Thanks,
Matt

Hi Matt

So they want about \$110 per extraction attempt so I can work up a quick quote for this as a pilot if you want to see how well their extraction method works on your ant samples. They will quant the sample post extraction and also run a caliper on it to assess DNA quality.

Thanks
Jim

Hi Jim, bummer to hear about the anopheles group. How much would it cost to run an extraction with your standard protocol? I can run out and grab some ants pretty easily within the next couple of weeks, but when we get into October, I'll have to travel further south.

Best,
Matt

Hi Matt

Sorry for the long delay. I'm putting the cost together for your project now and should have it to you soon. I was working with our anopheles collaborator to try to figure out who did his extraction for his project when we did it and to see if they would be able to work on the ant.

Unfortunately the group that did the anopheles extraction is no longer around and our sample handling group doesn't have experience extracting insect samples. They think their standard extraction protocol will work but have never tried it so there would be some risk involved. I am also checking with PacBio to see if they have any protocols or recommendations for getting high quality DNA from insects.

Thanks
Jim

Hi Matt

Let me check with them to see how they want to sample.

Thanks
Jim
